2.1 Unsolved Task Assignment
(To be attempted by the Candidate)

Questions which need to be automated for generating image explanation by only using the provided template (Ref 1.1.b. the formatting, colour & labelling remains same only the values should be different respectively):

Note - The answer generated by your Model to these questions provided below should look like the Sample Template provided above (Ref 1.1.b)

Q.1/5 Step wise textual explanation

Q. A trader marks an article 40% above its cost price.
He allows a 10% discount on the marked price and still earns a profit of ₹36.
Find the cost price of the article.

Sol: Let the cost price = ₹ x
1. Marked Price = 1.40 x
2. After 10 % discount → Selling Price = 1.40x X 0.90 = 1.26x
3. Profit = SP − CP = 1.26x − x = 0.26x

Given profit = ₹ 36
0.26x = 36

=> x = 36/0.26 ≈ 138.46
Answer → Cost Price ≈ ₹ 138.46

Step wise Visual Desired Template (Using the same template as Ref 1.1.b)
To be filled by the candidate

Q.2/5 Step wise textual explanation

Q. An article has a marked price of ₹ 2240.
It is sold at a discount of 20 % on the marked price, but the seller still makes a profit of 12 %. Find the cost price.

Sol: SP = 2240 × 0.80 = 1792

Profit = 12 % → SP = 1.12 × CP
CP = 1792/1.12 = 1600

Answer → Cost Price = ₹ 1600

Step wise Visual Desired Template (Using the same template as Ref 1.1.b)

To be filled by the candidate

Q.3/5 Step wise textual explanation

Q. A sells an item to B at 20 % profit.
B sells it to C at 10 % loss.
C pays ₹ 594.
Find A's cost price.

Sol: A's SP = 1.20 x
B's SP = 1.20 x × 0.90 = 1.08 x
Given 1.08 x = 594 → x = 594 ÷ 1.08 = 550

Answer → A's Cost Price = ₹ 550

Step wise Visual Desired Template (Using the same template as Ref 1.1.b)

To be filled by the candidate

Q.4/5 Step wise textual explanation

Q. A trader buys an article at ₹720 and sells it at a loss equal to 25 % of his cost price. At what price does he sell it?

Sol: Loss = 25 % of 720
= 0.25 × 720
= 180

Selling Price = Cost Price − Loss
= 720 − 180
= ₹540

Step wise Visual Desired Template (Using the same template as Ref 1.1.b)

To be filled by the candidate

BONUS QUESTION

Note - The question below is intentionally incorrect and included as a bonus test of validation skills.
You are expected to recognize or indicate the error found/throw error in your workflow.

Q.5/5 Step wise textual explanation

Q. A trader sells an article at a profit of 30%.
If he had sold it for ₹60 more, he would have made a profit of 20%.
Find the cost price.

Sol: If you try to solve it:

$1.30x + 60 = 1.20x$

$0.10x = -60$

$x = -600$

A negative cost price appears — meaning the problem is invalid.

Step wise Visual Desired Template (Using the same template as Ref 1.1.b)

To be filled by the candidate

Deliverables:

1. main.py or equivalent backend script
2. HTML/CSS/JS files for visualization
3. Input JSON sample file
4. Example output in the respective blank fields for each question
5. README.md explaining your workflow

Evaluation Criteria:

1. Visual Template Quality – 40%
2. Automation code and AI Integration – 40%
3. Creativity, Innovation & Visual Replica – 20%

Deadline: Submit the completed assignment along with your updated CV in PDF format within 48 hours to this email ID –
